

# COOLER AIR SAVING

## PATENTED SYSTEM

The best practice in cooling down enclosures involves also a correct distribution of the cold air, after it has been produced.

To make it possible, we supply air-blowing modules, connection fittings in technopolymer, and tubes with double insulation. All this to have zero losses of cold energy and to get the highest effectiveness in your application.

All these accessories are customisable, to meet your specific demands.

Filter against impurities, for the fixation of the hot air extractor

Fittings for cold air distribution

Customisable air-blowing module

Single air-blowing module
